

# WATER BATH HEATER

The water in the body is heated by radiant heat and convectional heat emitted from a firetube heated by a burner and the heated water indirectly heats the flowing gas in a tube bundle up to adequate temperature. Water bath heater is an excellent method of indirect heating.

## ■ SPECIFICATION

Capacity (Ton/hr)	25	50	100	150	200
Design Pressure	7.85 MPa				
Design Temp.	-20℃ ~ +100℃				
Heat Absorption (kcal/hr)	600,000	1,200,000	2,600,000	3,600,000	5,100,000
Thermal Efficiency	Above 90%				
Weight (Ton)	15	27	45	54	54
